

(a) Canonical mantras by recension
20,210 total; no other recension held

(b) Ten largest of 55 node labels in use
165,737 nodes, 510,905 relationships

(c) Relationships by epistemic layer. Agents were used throughout construction, yet model-extracted edges are 0.17% of the graph: the agentic contribution is concentrated in discovery, measurement and refutation, not in assertion. The untyped residue is a recorded defect, not a fifth layer.
